

BUILDING STRONG RELATIONSHIPS WITH OUR CUSTOMERS IS THE KEY TO OUR LONGEVITY IN THE ENERGY INDUSTRY.

Our primary focus is to translate the findings from our tracer technology into actionable insights that help our customers increase production and decrease operating costs.

We are proud of our almost 40-year history, but what is the value to our customers? Our proven tracer technology is an important and cost-effective tool used to better understand hydrocarbon reservoirs.

Here is what one of our customers has to say:

“Our first interaction with Isotopes Canada was for a gas-injection enhanced oil recovery research project. We wanted to quantify how much of the produced ethane was sourced from the injection gas and how much was sourced from the solution gas in the oil. By using a tritiated ethane source for the solution gas we were able to detect from where the produced ethane originated. Field applications of a similar technique were effective at identifying well-to-well interaction.”

- Dr. F. Brent Thomas, P.Eng. Resopstrategies.

Everything we do is focused on helping our customers do three things:

1. Make better decisions
2. Improve operations
3. Maximize profits
